

APEX DOOR OPERATOR UPGRADE

N^{eei.org} (National Elevator Industry Incorporated) estimates that elevators in the United States make 18 billion passenger trips per year. Now imagine the number of open and close door operations this can translate to in one building alone. Fujitec's APEX Door Operator is directly mounted to the car frame and includes a new AC vector duty motor, re-conditioned and/or replaced bearings, linkage and joints with traditional high quality solid-steel construction.

SYSTEMS AVAILABLE FOR UPDATE:

The APEX Door Operator Upgrade is a re-conditioning process available on original Fujitec APEX door operator installs.

CAR FRAME MOUNTED

Limits Cab Vibrations & Movement when Doors Open

PRECISION BEARING & JOINTS

For Extended Life & Durability

DUAL-DRIVE CLUTCH SYSTEM

For Precise Door Balancing
